

THE INFORMATION SCIENTIST

October 15, 1968

When Does Your *Current Contents* Arrive?

From time to time, a reader will complain that he is not receiving *Current Contents* promptly. Most readers should receive *CC* on the same day of each week. This is especially true in Europe since *CC* is sent via air cargo each week and delivered by surface mail over the weekend. Most subscribers should receive *CC* on Monday or Tuesday each week.

Recently, we improved delivery of *CC* to Africa and the Middle East by an average of two weeks. *Current Contents* for these countries is also first shipped by air cargo to Amsterdam, and then to individual countries in Europe and Africa by surface mail. India also receives this service. Recently we also inaugurated a special air cargo shipment to Japan, which significantly lowered costs to Japanese scientists who previously paid a premium for air mail service to speed delivery.

We hope to extend these air cargo shipments to all parts of the world in the near future. In the meantime, many scientists in Latin America and other countries where the service is not yet available find *CC* of such value that they pay the additional cost of air mail delivery.

It is a tribute to *CC* that there are so many air mail subscriptions. There are still many other subscribers, however, who have not taken advantage of this method of receiving *CC* promptly. If you would benefit from faster receipt of *CC*, we suggest that you use it.

Unfortunately, the fluctuating values of local currencies in many countries prevent many scientists, who desire and need *Current Contents*, from obtaining subscriptions directly. It is not surprising, therefore, that many of their colleagues in the United States and other countries generously place subscriptions for them. If you wish to arrange such a subscription, you can count on our cooperation.
